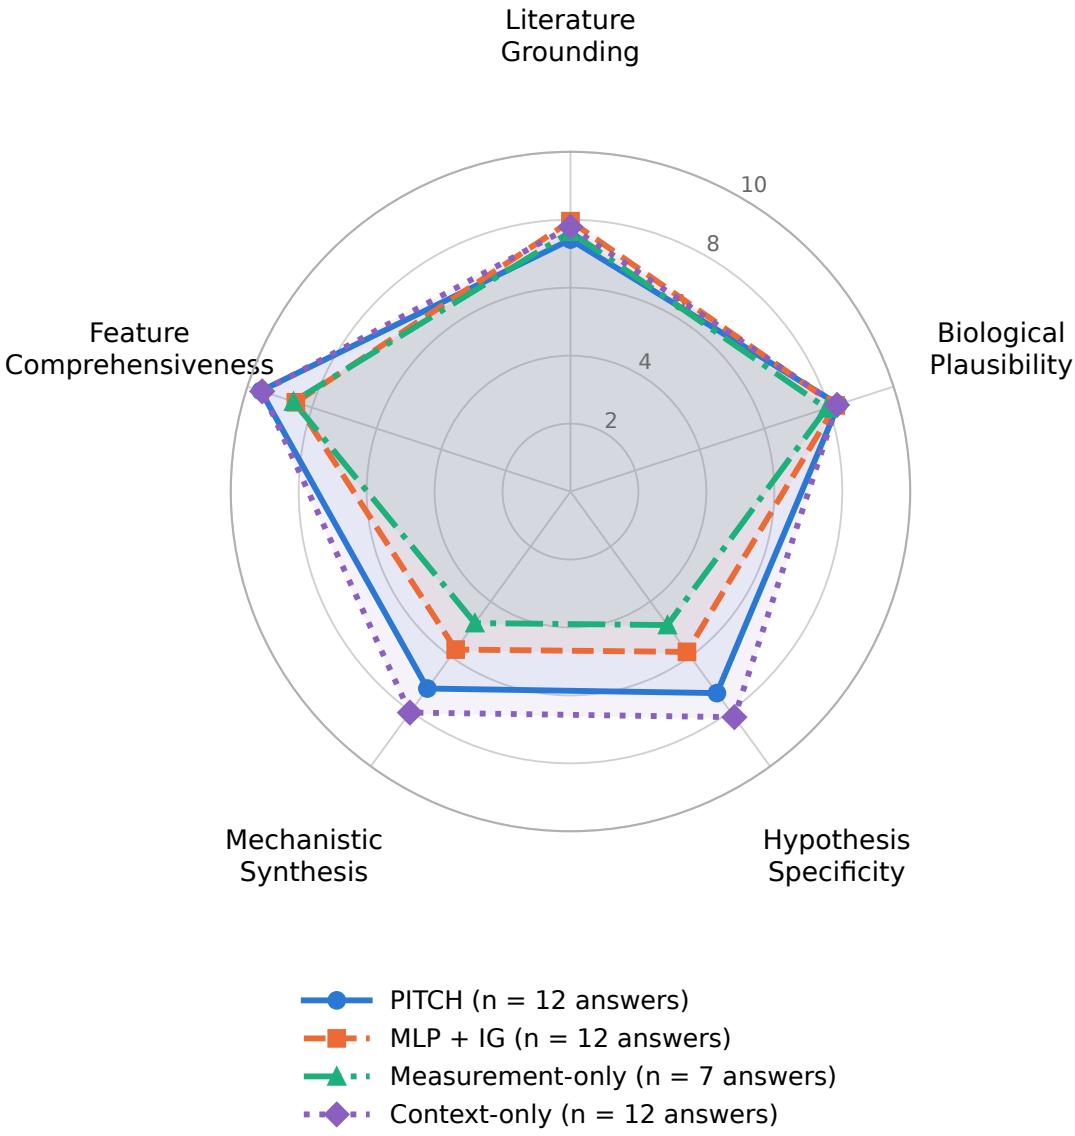
Hypothesis quality by input condition
All models averaged (3 datasets); all axes



n = successfully generated answers (one random committed answer per model and prompt):
PITCH 12, MLP + IG 12, Measurement-only 7, Context-only 12.
Context-only is drawn on all five criteria for reference; Feature Comprehensiveness and Mechanistic Synthesis are defined on supplied focus / contextual features and do not apply when no data are given, so they should not be read as comparable to the other conditions.
